TABLE LOCATION:

PROJECT NO:

STUDENTS:

Science projects submitted by students in grades K to 2 are not graded or assigned point scores. The aim of the judging is to offer encouragement and feedback and to give students valuable experience in talking about their scientific endeavors.

Judges are asked to spend time with these students reviewing and discussing their projects, commenting on the display and sharing with them the judge's experience and knowledge about the subject of the project.

These students are developing a rudimentary knowledge of Scientific Method and should be encouraged to discuss the following aspects:

Problem - the question they set out to answer

Hypothesis - what they expected

Experimentation - what they did

Results and Conclusions - what they found out

All students in these grades will be awarded Blue Ribbons to reward their efforts.

Comments (These will be shared with the student):
